Shukrullo Kurbonov

Bukhara, Uzbekistan · +998 94 809 80 84 · shukrulloqurbonov342@gmail.com · github.com/ByteHunter833 · shukrullo-dev.vercel.app

Education

Bukhara State University — Bukhara, Uzbekistan B.S. in Computer Engineering (Information Technology) · Expected July 2027 · GPA: 3.39 / 4.0

Baku Higher Oil School (BHOS) — Baku, Azerbaijan Academic exchange student, Software Engineering and Computer Science · Spring semester 2026

Experience

Brain Solutions MMC — Software Developer (Flutter) · Baku, Azerbaijan · Jun 2026 – Jul 2026

- Shipped 10 features end to end in a production Flutter/Dart app built on MVVM and Clean Architecture, from UI through state management to the data layer.
- Integrated 10 REST API endpoints, handling serialization, error states and auth tokens, and worked with backend engineers on API contracts and response formats.
- Worked in a cross-border team in English and Russian through code review, Git-based workflows and sprint planning.

Projects

Online Banking System Backend — Python, FastAPI, PostgreSQL, Redis, Docker · github.com/ByteHunter833/Online-banking-system-backend

- Built an async REST backend with SQLAlchemy 2.x on PostgreSQL, with Redis as the session store and Alembic for schema migrations.
- Made money transfers atomic and race-free by using row-level locks (SELECT … FOR UPDATE) inside a single transaction, so concurrent transfers cannot overdraw an account.
- Built JWT authentication with refresh-token rotation, securing 56 API endpoints, including 12 with role-based access control.
- Containerized the API, database and cache with Docker Compose so the full stack starts with one command.

ApriSoil — Soil Monitoring Backend — Python, Django REST Framework, Docker · github.com/ByteHunter833/aprisoil_backend_api

- Built the backend for a mobile app that gives farmers irrigation recommendations, combining sensor soil data, a physics-informed ML model and an external weather API.
- Built REST endpoints and a data pipeline that run model predictions and send weather-based alerts to app users.
- Deployed with Gunicorn (WSGI) and Uvicorn (ASGI) behind Docker, with CORS set up for the mobile client.

E-Commerce Web App — Python, Flask · github.com/ByteHunter833/Ecom

- Built a store with user authentication, session management and a product catalog backed by a SQL database.

Technical Skills

- **Languages:** Python, C++, SQL, Dart, Java
- **Backend:** FastAPI, Django REST Framework, Flask, SQLAlchemy 2.x (async), Alembic, REST API design, JWT authentication
- **Data and infrastructure:** PostgreSQL, Redis, Docker, Gunicorn, Uvicorn, Git, Postman
- **Concepts:** data structures and algorithms, concurrency and transactions, async programming, Clean Architecture/MVVM
- **Problem solving:** 162 algorithmic problems solved on acmp.ru (competitive programming judge, Python and C++); ranked 7,359 of 312,359 users (top 3%)

Languages

Uzbek (native) · Russian (C1) · English (B2)
